# Shutdown My Computer by POPA_3D « Phone Call Configuration »

1-Checkout if your computer has a RJ-11 port for dial-up modem, majority of laptops have one or you have a 56k modem that can emit phone call from computer.

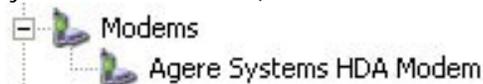

2- Check if the modem driver is correctly installed...
        Go to My computer right click > proprieties > hardware > Device Manager

        From the list be sure you have the modem installed. (my modem is called Agere Systems HDA Modem)

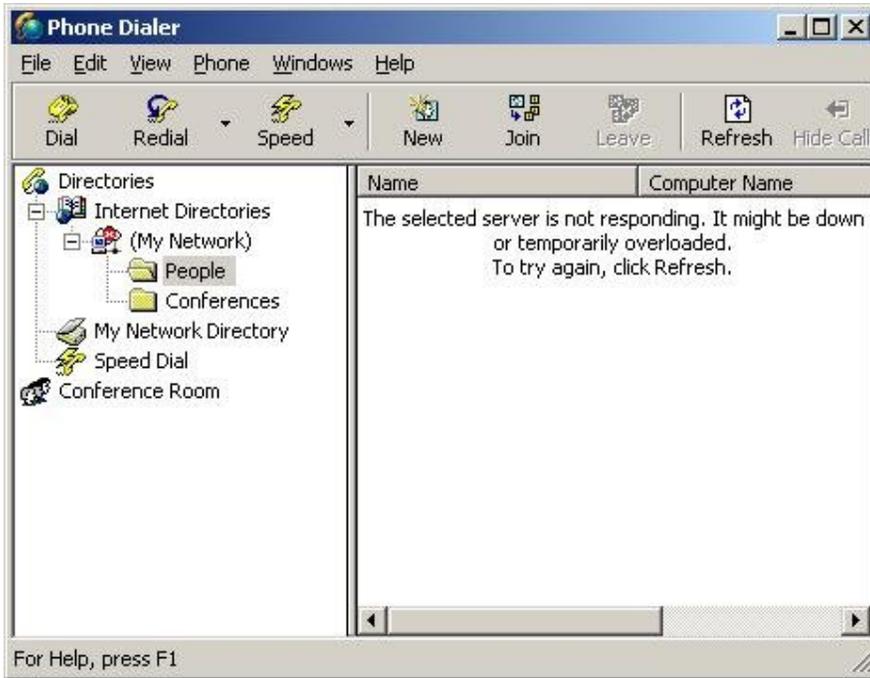

3- Connect your PC to your phone line using rj11 cable (it is the same cable that connects your DSL modem or your desk phone to your phone line).
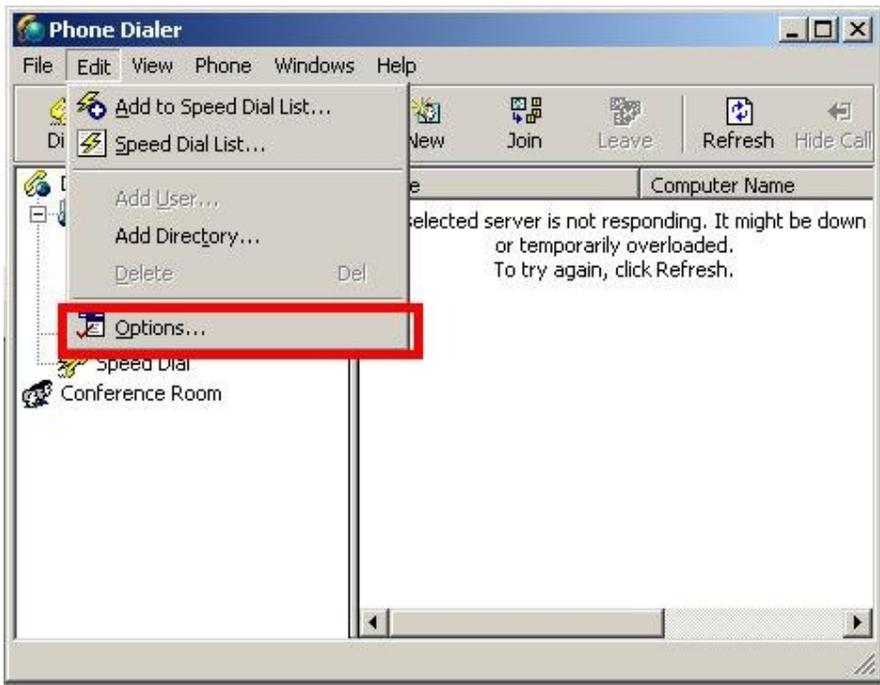

4- Now dialer software configuration.
To run it start menu> run then type dialer.exe

Then go to edit> option

Now chose phone and modem options...

The following window appear...type your country code exemple 1 for US and click ok

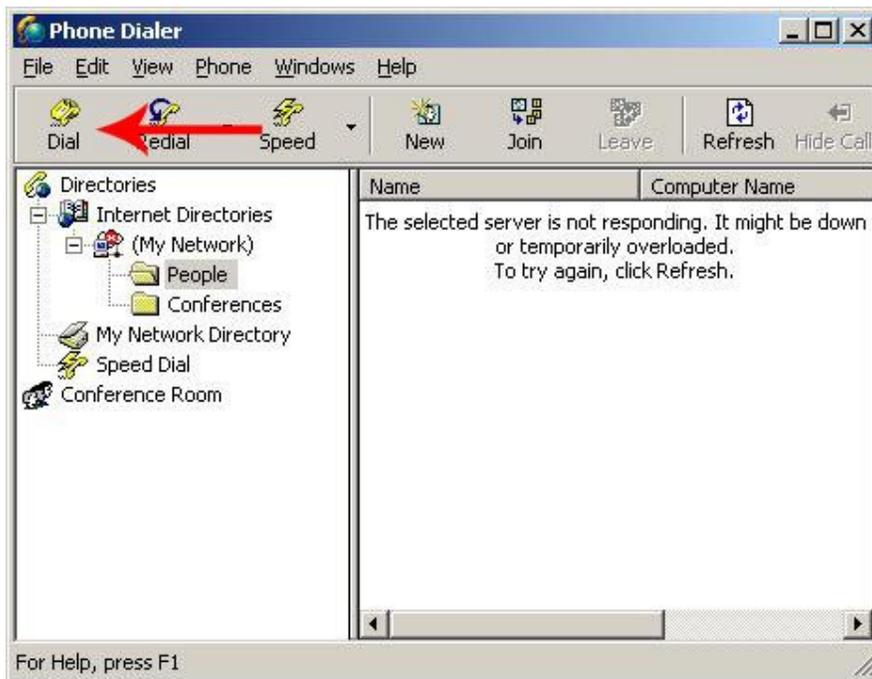

Click ok when A windows like this appear...

Then chose your modem from phone call dropdown list

Try to call your self click on dial icon

Then enter the phone number the same way you do when you call from the phone desk. (Don't use the same phone line number☺)

If your mobile or phone ring this mean every thing is ok.
Exit the program we don't need it now .

5- what you need now is a small program that work with dialer it is free you can download it from here http://www.iansharpe.com/downloads/dialexe_V3.zip

6- in this folder you will find an executable file called dial.exe
Copy this file to c:\windows\system32

Now every thing is ok and the script is ready for use.

-Drag Shoutdown My Computer.mzp into your scene then go to (or better to run it from maxscript menu)
-customize>customize user interface> toolbars category popa_3d scripts then drag it to your desired toolbar.

- Shutdown will shutdown the computer
- Logout will Log off the user
- Quit 3ds Max will exit 3ds Max
- Force Close All Applications will forces running applications to close without warning
- Wait Before Shutdown will let you Set a given time for shutdown, in seconds
-call phone number will call a phone number (enter it the same way you do when you call from the phone desk.)

Additional Notes:

Let's say that you need to cancel a shutdown in progress. Hit Windows Key + R then type shutdown -a

Before any action the script will save your scene in the folder of your choice under the name SavedBeforeShutdown.max

For Security the script will check if there is a specified output path before render

the script is tested on windows XP but should work on win 7 or vista (the phone call depend on dial software

Please be careful using this script and test it to know how it works before using it on an important job.

Hope you like it.
