

## FumeFx range sync quick guide

This is a very simple script for speed up the synchronization between one or more FumeFx grids range sim/playback timeline and timeline animation range. It can be useful for boring repetitive tasks like sync all of your FumeFx grid' simulation time with new timeline values.

Installation:

Method 1

- Run the script or drag into the viewport
- Go to customize user interface and find the “Raffx” category
- Chose the script and assign a keyboard shortcut
- Enjoy!

Method 2

- Run the script or drag into the viewport
- Go to customize user interface into “toolbars” tab
- Create a new toolbar or edit one
- Drag the script into the toolbar
- Enjoy!

UI:

There are only two buttons in the UI:

- Sync button, to synchronize FumeFx grids
- Reset button, to reset to default timeline values(0-100)

How it works:

Select ONLY one or more FumeFx grids, press “Sync Now” and will synchronize the frame ranges. Press reset to bring the timeline to default values(0-100)
